

Product Feature

1. Package Type: 2"X 1"
2. Input voltage range: 4:1
3. Operating temperature range: -40°C - +85°C
4. Isolation voltage: 1500VDC
5. High efficiency up: 90% (Typ.)
6. Equipped with output short-circuit protection, overcurrent protection, and overvoltage protection mechanisms.
7. Fields of application: Industry, Power, Instrumentation, Communication, Rail transit.

Note:

1. All DC-DC converters of this series are tested before delivery using the recommended circuit shown in Fig. 3.
2. Input and/or output ripple can be further reduced by appropriately increasing the input & output capacitor values C_{in} and C_{out} and/or by selecting capacitors with a low ESR (equivalent series resistance). Also make sure that the capacitance is not exceeding the specified max. capacitive load value of the product.
3. The products do not support parallel connection of their output.

Note:

1. The input voltage should not exceed the specified range value, otherwise it may cause permanent and irreparable damage;
2. It is recommended to use at a load of over 5%. If the load is below 5%, the ripple index of the product may exceed the specifications, but it does not affect the reliability of the product;
3. Suggested dual output module load imbalance: $\leq \pm 5\%$. If it exceeds $\pm 5\%$, it cannot be guaranteed that the product performance meets all performance indicators in this manual;
4. The maximum capacitive load is tested within the input voltage range and under full load conditions;
5. Unless otherwise specified, all indicators in this manual are measured at $T_a=25^{\circ}\text{C}$, humidity<75% RH, nominal input voltage, and output rated load;
6. All indicator testing methods in this manual are based on our company's corporate standards;
7. Our company can provide product customization, and specific requirements can be directly contacted by our technical personnel;
8. Product specifications are subject to change without prior notice.
