

FEATURES

1. Wide input voltage range (2:1)
2. High efficiency up to 86%
3. I/O isolation test voltage 1.5k VDC
4. Output short-circuit protection (self-recovery)
5. Operating ambient temperature range: -40°C to +85°C
6. Meet CISPR32/EN55032 CLASS A, without extra components

3 years

Design Reference

1. Output load requirements

In order to ensure the converter can work reliably with high efficiency, the minimum load should not less than 5% rated load when it is used, or the output ripple may increase rapidly. Ensure that the product working load must be higher than 5% of the rated load.

2. Typical application

All DC-DC converters of this series are tested before delivery using the recommended circuit shown in Fig. 2.

Input and/or output ripple can be further reduced by appropriately increasing the input & output capacitor values C_{in} and C_{out} and/or by selecting capacitors with a low ESR (equivalent series resistance). Also make sure that the capacitance is not exceeding the specified max. capacitive load value of the product.

CY1	1nF/2kV			

Note: ① For EMC tests we use Part ① in the Fig. 3 is used for immunity and part ② for emissions test. Selecting based on needs.

② If there is no recommended parameters, the model no require the external component.

4. Input current

When the electricity is provided by the unstable power supply, please make sure that the range of the output voltage fluctuation and the ripple voltage of the power supply do not exceed the indicators of the modules. Input current of power supply should afford the flash startup current of this kind of DC/DC module(see Fig. 4).

Generally: Vin=5V	Iave =1297mA
Vin=12V	Iave=649mA
Vin=24V	Iave=307mA
Vin=48V	Iave =158mA

Notes & Instructions

1. If the product works under the minimum required load, it cannot guarantee that the performance of the product complies with all the performance indicators in this manual;
2. The maximum capacitive load is tested under the input voltage range and full load condition;
3. Unless otherwise stated, all indexes in this manual are measured at Ta=25°C, humidity <75%RH, nominal input voltage and rated output load;
4. All index testing methods in this manual are based on the enterprise standards of the company;
5. Our company can provide product customization, specific needs can directly contact our technical staff;
