## Application circuit description:

1. All DC/DC converters in this series are tested according to the recommended testing circuit (Figure 2) before leaving the factory.
2. If further reduction of input and output ripple is required, the input and output external capacitors C0, C1, C2, C3 , C4 can be increased or a capacitor with a small series equivalent impedance value can be selected.

- Note:**
1. The input voltage should not exceed the specified range value, otherwise it may cause permanent and irreparable damage;
  2. It is recommended to use at a load of over 5%. If the load is below 5%, the ripple index of the product may exceed the specifications, but it does not affect the reliability of the product;
  3. Suggested dual output module load imbalance:  $\leq \pm 5\%$ . If it exceeds  $\pm 5\%$ , it cannot be guaranteed that the product performance meets all performance indicators in this manual;
  4. The maximum capacitive load is tested within the input voltage range and under full load conditions;
  5. Unless otherwise specified, all indicators in this manual are measured at  $T_a=25^\circ C$ , humidity < 75% RH, nominal input voltage, and output rated load;
  6. All indicator testing methods in this manual are based on our company's corporate standards;
  7. Our company can provide product customization, and specific requirements can be directly contacted by our technical personnel;
